HOW CLOSE

Outline: within 1/16", typically less than 1/16" — the widest gap 9/16" from the nose, where the file is wider than our fit
Rocker: within 1/8", typically 1/16" — the widest gap 25 7/8" from the nose
Thickness: within 1/8", typically less than 1/16" — the widest gap 39 5/16" from the nose
Bottom: within 1/16", typically less than 1/16" — the widest gap at the section 12 5/16" from the nose, 7 15/16" out from the stringer
The rocker and thickness gaps leave out the last 1" at each end, where a file may round its tips over; our side view ends square.

To match the file's rocker exactly, pick a blank on ROCKER and use Customize Rocker to bring it to these figures.
The file's rocker is the finished board's, along the stringer; ours is the board before contours. Under a concave the finished rocker reads more, by the concave's depth there; under a flat, vee or belly the two are the same line.
Our fit's concaves lift its stringer by up to 5/16" (at Nose 12"): the figures above are the finished stringer's. The board is planed that much lower there, and ROCKER shows the rocker before contours once the board is open.

SUGGESTED BLANKS

One blank from each maker that this board fits in by your App Default Settings, its rocker closest to the file's. The figures are the board's rocker on that blank against the file's ROCKER figures: + is more rocker, - less; the gaps leave out the last inch at each end.

The bottom is read across each of the file's cross-sections, from the stringer to nine-tenths of the way out to the rail; the rail itself isn't read yet. A section that is all but flat reads as flat.

Read from 5 of the file's 5 cross-sections; the ones within 1" of a tip are left out.
